GENERAL

The S7014A and B Setpoint Adjustment Units are designed for unit mounting and are connected directly by a 2-meter-long cable to the input of the Control Output Modules R7452D,E,F.

The S7014A and B Setpoint Adjustment Units are used for the manual adjustment of the room temperature setpoint. The S7014B also allows the fan speed to be manually adjusted, and is suitable for switching between automatic and manual operation of a single-phase alternating current motors having up to three speeds.

The S7014C has the same features as the S7014B, but the resistance values are the same as those of the XL10/XL500 system.
