Networking of several fire control panels

Up to 32 control panels and terminals can be linked to form a cluster (FCnet/SAFEDLINK network). If the cluster is connected to a danger management system via BACnet, up to 16 control panels and terminals can be networked.

The use of an optical Ethernet network (FCnet/LAN) allows up to 14 clusters with up to 16 stations to be operated on one network (up to 64 stations in total).

You will find details of system networking in product data sheet 008955.

Function features

- The FC2060 is a modular fire control panel with integrated operating unit that is intended for large sites and for modernizing existing large fire detection installations based on earlier systems.
- The FC2060 processes signals from Sinteso devices, from addressable devices based on earlier systems, and from collective devices.
- The control panel may be used as a standalone unit or networked.
- There is a card cage with five slots for inserting the following module bus cards:
 - Line card (FDnet) FCL2001-A1
 - Line card (collective) FCL2002-A1
 - Line card (MS9i) FCL2003-A1
 - Line card (AnalogPLUS) FCL2005-A1
 - Line card (interactive) FCL2006-A1
 - Line card (interactive, Ex) FCL2007-A1
 - I/O card (programmable) FCI2008-A1
 - I/O card (horn/monitored) FCI2009A1
 - I/O card (RT) FCI2007-A1
- Mixed use of all module bus cards (line and I/O cards) possible
- Auto-configuration of the detection logic and controls directly on the control panel itself or manual configuration with SintesoWorks
- The control panel and the fire detection system are custom-configured using the SintesoWorks software.
- Customer texts can be adapted directly on the operating unit of the control panel or with the SintesoWorks software.
- Up to 2000 events can be retrieved from the event memory based on various criteria.
- Automatic summer/winter time changeover
- Siemens danger management system can be connected

Operating unit

The following elements are available on the operating unit:

- CPU module and electronics
- Ethernet connection
- Slots for RS232 and RS485 modules and network modules (SAFEDLINK)
- Space for 'Kaba' or 'Nordic' key switch
- Space for event printer
- Peripheral data bus connection for optional LED modules

Periphery board

The following elements are available on the periphery board:

- Connection terminals for FDnet lines, remote transmission (alarm, fault), horn output, configurable control inputs and outputs, monitored alarm and fault output, emergency supply, power supply
- Two slots for loop extension (FDnet)

Card cage (5 slots)

There is a card cage mounted on the rear housing panel for inserting up to five module bus cards.

Power supply unit 150 W, emergency power supply

The power supply feeds the hardware and charges the batteries.

In the event of a power cut, the batteries provide emergency current.

Housing

A pivoting mounting plate can be fitted for the following elements above the periphery board on the rear housing panel:

- 1x fire brigade periphery module
- 2x sounder modules (can also be mounted on U-rail TS35)

Configuration

The SintesoWorks software allows the system to be customized.

Application ranges

The FC2060-CC is ideal for large applications, e.g., for use in industrial plants, office complexes, or factory halls. Within the context of modernization, it allows a gradual and seamless transition from older systems to Sinteso.

Operation

Each control unit has an integrated operating unit. The control panel can also be operated via a separate FT2040 fire terminal.

You will find details and more information in product data sheet 009386.
